Our company goals are to provide the solutions that protect our surroundings, raise the environmental awareness, and promote the growth of the community.

Providing environmentally safe seal-less magnetic pumps of the highest quality for over 30 years

Services

API & CPI Processes
- Chemical Processing
- Petrochemicals
- Petroleum By-Products
- Hydrocarbons
- Liquefied Gases

Thermal Transfer Systems
- High-temp Synthetic Oils
- Low-temp Synthetic Oils
- Super Heated Water

Refrigeration Systems
- Ammonia, CO2
- Fluorocarbon Refrigerants

Zero Emissions
Field Repairable
Standardized Motors
WARRENDER SEAL-LESS MAG-DRIVE PUMPS

Seal-less Pumps - Standard Motors™

Warrender mag-drive seal-less pumps meet EPA zero emissions regulations with versatile magnetic coupling technology. Minimal heat loads, field serviceability and lower installation costs are significant process advantages. Solve your most challenging pumping problems with reliable and cost effective solutions.

Zero Emissions and Maximum Safety

Benefit from a process free of leakage, contamination or toxic releases while avoiding constant monitoring and potential environmental fines. Eliminate all toxic and dangerous chemical releases including volatile and toxic liquids that can react with atmospheric contact.

Advanced Technology and the Highest Quality for Long Pump Life

WARRENDER pump designs are built to the highest quality standards to protect your process, preventing costly maintenance and lost production time.

- Robust, high thickness pump casings
- High efficiency impellers with low NPSH requirements
- High strength, rare earth magnetic couplings suitable for extreme temperatures
- Heavy duty rear casings
- Rugged internal bearing system withstands process upsets

Performances to the Extreme

- Flows from 0.1 to 1500 gpm
- Pressures up to 2200 psig
- Heads to 1000 feet
- Temperatures from -139°F to +600°F
- Pump liquefied gases or liquids with low NPSH
- Compatible with VFD control systems
Three Designs Provide Complete Hydraulic Coverage

- High head turbine
- High flow centrifugal
- Low flow rotary vane for injection

Typical Applications

- All EPA monitored chemicals
- Dangerous, toxic, noxious and carcinogenic liquids
- Solvents, hydrocarbons, pyrophorics and other volatile liquids
- Heat transfer fluids (up to +600°F, 840°F w/ heat exchanger).
- Hot / super heated water
- Liquid Ammonia, CO2 and Fluorocarbon Refrigerants
- Liquefied gases
- High pressure circulation systems
- Pressurizing mechanical seal pots
- Sampling, metering or chemical injection systems

Seal-less Low Heat Load No Flashing
Transfer Pumps: Low NPSH - High Head, Seal-less Turbine

Series WMTA-LN mag-drive regenerative turbine pumps safely meet high head, low NPSH system requirements. Dynamic turbine impeller pumping action handles entrained gases to resist vapor locking.

WMTA-LN Features

- High head pumping with pulsation free performance
- Handles up to 20% entrained gas, resists vapor locking
- Dynamic design (avoid over pressurization w/ P.D. pumps)
- Low heat induction to avoid flashing
- See pages 8-9 for more information

WMTA-LN Performance Range

- Flows from 5 to 40 gpm (1.1 - 9.1 m³/h)
- Heads to 1000 feet (305 m)
- System Pressures to 1450 psig (100 bar)
- Temperatures from -139 to +600°F (-95 to +315°C)
- NPSHr to 1’
Performance Curves 3600 RPM (60Hz)

WMTA6-LN-2S

</tbody>
</table>
WMTA Performances Range

- Continuous or intermittent low flow – high head pumping
- Handles up to 20% entrained gas and resists vapor locking
- Flows up to 40 gpm (9.1 m3/hr)
- Heads up to 500 feet (115 m)
- System pressures from vacuum up to 2200 psig (150 bar)
- Temperature from -150°F/ -100°C to +600°F/ 315°C

Rise to Shut-Off & Flow Control

Turbine pumps are rated for continuous duty in low flow – high head systems. Variations in differential heads have minimal effect on turbine pump flow due to the high rise to shut-off. Dynamic turbine pump characteristics accommodate control valve regulation without by-passing.

The hydraulic barrier between stages is made of a special high pressure static seal. Available in 2 or 3 stages.

“Barrel” construction, with back inserted volute rings, to have the best hydraulic alignment and the longest wear ring life.

Particular design of the hydraulic, with self balancing impeller to improve the wear ring life.

The range design is available in 2 or 3 stages, with or without centrifugal inducer to minimize the required NPSH to 1’ - 2’.

CF8M or WCB pump casing, cover & impellers. High quality casting components.

Other materials: Hastelloy C276, Incoloy825, Duplex, or others available on request.

Drain plug (1/2”NPT)

REAR CARTRIDGE KIT to ensure easy and fast maintenance retrofits.
Confined casing O-rings prevents product leakage to atmosphere – different materials available:

- PTFE
- Buna
- Viton
- Kalrez

Field servicing of the lubricated bearings does not require special tools

The bearing materials are available in three different materials to match each application: Silicon Carbide (SIC), Tungsten Carbide (TC), Carbon to allow intermittent dry running

The tolerance rings accommodate differential rates of thermal expansion and properly align the sleeve bearings

Epoxy primer and polyacrylic enamel water-based painting for optimal chemical resistance, yet environmentally friendly

Hastelloy®-C276 or Titanium G5 isolation shell material - providing a safe and efficient solution – system pressure max 100 BAR

High torque synchronous rare earth magnetic coupling

The high performance magnets can be operated at liquid temperatures of up to 600°F (315°C) without external cooling
Series WMCA
ISO-2858 / API-685
Process Centrifugal
(medium to high flows)

Compressor Circulation Pumps: Low Heat Load Seal-less Centrifugal

Series WMCA- ISO-2858 mag-drive centrifugal pumps are engineered for long-life, zero emissions pumping in the most arduous process conditions. Low heat induction avoids costly down-time and repairs due to flashing, in chemical, hydrocarbon, ammonia and CO2 systems.

WMCA Features

- Low heat load avoids flashing
- Seal-less design free of mechanical seal maintenance
- Magnetic coupling design for process & inventory flexibility
- Standard NEMA motors meet UL and EXP requirements

WMCA Performance Range

- Flows from 8 to 4500 gpm (2-1000 m³/h)
- Heads to 650 feet (200 m)
- System Pressures to 1,450 psig (100 bar)
- Temperatures from -139 to +600°F (-95 to +315°C)
Composite Curves 1800 RPM (60Hz)

Composite Curves 3600 RPM (60Hz)
Field assembling of the product lubricated bearing arrangement does not require special tools. The bearing materials available in three different materials to provide the best solution for each application: Silicon Carbide (SSIC), Tungsten Carbide (TC), and Carbon.

The use of tolerance rings reduces the sleeve and thrust bearing loads to guarantee many years of maintenance-free operation.

Epoxy primer and polyacrylic enamel water based paint system for a corrosion resistant coating, yet environmentally friendly.

Close coupled and bearing pedestal drive assemblies

CF8M pump casing & impeller
High quality casting components
Other materials: Hastelloy C276, Incoloy825, Duplex, Titanium, or others available on request

REAR CARTRIDGE KIT
For quick retrofits

Closed impeller statically and dynamically balanced. The axial thrust loads are balanced by back vanes.

High strength, synchronous magnetic couplings, are free of epoxy or potting materials, and fitted with samarium cobalt rare earth magnets. The high performance magnets can be operated at liquid temperatures up to 662 °F (350 °C) without external cooling. Power capability exceeds 700 HP / 520 kW.

Confined casing gaskets prevent leakage to the atmosphere – optional materials available:
- PTFE
- Graphoil type
- Garlock type
- Gylon type
- Flexitallic type

### Centrifugal Flow Ratings

The accepted guideline for centrifugal pumps is 10% to the right of BEP (Best Efficiency Point) and 20% to the left. This ensures optimal hydraulic efficiencies and prevents runout and high head cavitation. Recirculation frictional heat of process liquid within centrifugal pumps operating below minimum stable flows can lead to high head cavitation from the energy that is imparted into the liquid.
Series SR
Close-Coupled Centrifugal
(low to medium flows)

Compressor Circulation or Transfer:
Versatile Seal-less Centrifugal

SR Performance Range

- Flows from 2 to 150 gpm (0.5 - 34 m³/h)
- Heads to 115 feet (35 m)
- System Pressures to 720 psig (50 bar)
- Temperatures from -148 to +450°F (-100 to +232°C)

Series SR compact mag-drive centrifugal pumps meet low flow requirements with comparable features of the WMCA design.

Standard SR Wetted Materials: 316L-SS front casing, impeller and rear casing, PTFE-C or Carbon sleeve and thrust bearings, single confined o-ring.

- Note: Maximum condition stated references open pumping capacity and maximum head at the limits of the curve.
- * depending on operating temperature
Performance Curves 3600 RPM (60Hz)

Series MPA
Rotary Vane
(low flows - high pressure)

Injection and Sampling Pumps: P.D. Seal-less Rotary Vane

MPA Features
- Seal-less magnetic coupling eliminates seals or packing glands
- No metal to metal contact for extended MTBF
- Capable of differential pressures up to 200 psig
- Self-priming up to 13 feet of dry lift, runs dry without damage

MPA Performance Range
- Flows from 0.1 to 11 gpm (22 to 2500 l/h)
  - Range 1° from 0.1 to 2.2 gpm
  - Range 2° from 2.2 to 5 gpm
  - Range 3° from 5 to 11 gpm
- Heads to 200 psig (12 bar)
- System Pressures to 600 PSI (40 bar)
- Temperatures to 450°F (232°C)
